+ projects

Servier CDMO Feb 2017 to Mar 2017

- Built custom templates in HubSpot for quickly prototyping web pages with the ability for easy customization.
- Designed and implemented custom modules to get around system limitation of displaying multiple blog articles in one feed and allowing the client to change the featured article with minimal effort.
- Utilized jQuery & CSS to dynamically crop and center images allowing for user uploads of any size, and used Slick jQuery plugin for rotating images and news articles slide shows.

Nice Symposium Mar 2017 to Mar 2017

- Developed page templates and built out all pages with guidance from design team comps
- Created custom jQuery solution to integrate with default HubSpot forms to implement custom fields and enrich lead generation
- Completed full site build-out and deployment within 2-week deadline, adapting to changing requirements and new deliverables up through the last hour

EPA Federal Facilities Dashboard Sep 2016 to Nov 2016

- Interactive data visualization dashboard built with Oracle Application Express for US Government client
- Utilized SQL and PL/SQL for querying Oracle database for each chart and associated data tables, AnyChart for creating chart visuals
- Quickly learned Oracle Apex and PL/SQL technologies to take over all development responsibilities as sole developer and main point of contact for ongoing project

Developer Dashboard Summer 2016

- Full MEAN-stack solo project, dashboard application created to help boost productivity and track projects and deliverables for developers.
- Idea generation, wireframing, front end design, backend database schema and routing, Angular development, routing and authentication.

AdventureTo Spring 2016

- Full stack travel app allowing users to research, plan and journal their travels.
- Personal project built using Node.js, Express, HTML, CSS, Javascript, utilizing Materialize framework and the Flickr API and deployed to Heroku.

Bankly Spring 2016

- Full stack personal finance app built on Ruby on Rails which allows users to track their spending and uses data visualization to give monthly breakdowns of expenses organized by category.
- Group project - I served as Github & Project Manager as well as handled all backend development, implemented data visualization through Chart.js and image uploads through the Cloudinary API, and designed/built the user profile page.
